

How to make it so everyone can hear the audio from your iPhone

In the upper right corner of the screen on your control center page is a faintly blinking blue icon that looks like this.

Touching this icon will bring up the following page.

From here you can choose where you want the sound to go.

Your choices will be iPhone so that everyone can hear through the speaker in the phone, your hearing aids, or there might be an option for any additional BlueTooth audio accessories that you might have connected to your iPhone.
